Embarrassed about your smile? There's no need

Losing teeth can have a huge negative impact on your quality of life. To replace real teeth, conventional dentures are a solution, but they simply don't stay in place, potentially causing pain, bleeding and discomfort. Not to mention embarrassing situations.

Everyone deserves beautiful teeth

To be able to laugh and speak with confidence, and to eat everything without discomfort, Straumann provides a wide range of treatment options to fix teeth on dental implants so they stay in place and are as secure as natural teeth. The Mini Implant System is one of these options, helping to restore your self-confidence and put a carefree smile back on your face again.

Straumann® Mini Implant System

The Straumann® Mini Implant System retains your removable denture, with a snap-fit connection, on 4 implants in the lower jaw and 6 implants in the upper jaw. You regularly remove the denture yourself for cleaning.

Compared to regular implant sizes, Mini Implants are smaller in diameter and have integrated retentive elements to fix and remove your teeth.

When treated with Mini Implants, usually the implantation procedure is straightforward, meaning you can already have your new teeth on the day of surgery, and the surgery is in general **minimally invasive**. Also, this treatment allows you to rebuild your existing denture and may require fewer visits to the dentist, possibly reducing the overall costs.

With the Straumann® Mini Implant System you can restore your **quality of life**. You will be able to freely **talk, smile and laugh**, or **eat** whatever you want wherever you want. You can simply enjoy spending time with family and friends.

“I’ve been wearing dentures for about five years and was condemned to use a fixative cream. This “gluing” process would often make me retch and so I would stop it. But this led to loose dentures and protracted mealtimes as I meticulously chopped up my food, as well as weight loss. So then I would avoid eating in public. Now, having been fitted with the aforementioned implants, my dentures sit firmly. I can bite down with confidence and I’ve gained the courage to eat in public again. My quality of life has improved significantly.”

Anneliese, 84 years old

AFFORDABILITY

Reduced costs due to an implant design with integrated retentive elements, fewer visits and the possibility to convert a conventional denture for use with Mini Implants.

HIGH DURABILITY

The Optiloc® fixation system is designed to resist wear and be low in maintenance.

TEETH THE SAME DAY

With the Straumann® Mini Implant System, bone augmentation procedures can be avoided and you can leave the practice with dentures on the day of surgery* or shortly afterwards.

* Immediate fixation of the denture depends on the primary stability of the placed implants and may not be possible in all cases.

LIFETIME GUARANTEE*

Because we are so confident in the quality of our implant solutions, for your peace of mind Straumann® gives a lifetime guarantee.

*Guarantee conditions may differ from country to country.

“I’m completely amazed by the Straumann® Mini Implant. The combination of optimal osseointegration produced by the proven Roxolid® and the SLA® surface and the prosthetic functionality resulting from the Optiloc® abutment opens up new possibilities in the management of partially and completely toothless patients. Both the chewing function and quality of the life of patients are improved significantly.”
